

3D GROWTH

DATA DRIVEN DECISION MAKING FOR STUDENT AND SCHOOL SUCCESS

DO YOU WANT TO LOOK AT DATA IN A NEW AND ENGAGING WAY?

E3 Alliance has developed the most robust and accurate approach to measuring student academic growth data for Texas school districts. The **3D Growth** model enables districts to compare outcomes objectively across student types, schools, and districts, as well as drill down to growth scores for individual students and teachers.

“Simply one of the best days of learning our district has had!”
--Deputy Superintendent

“This gave me complex data in an easier to digest format. Numbers became action plans!”
--Principal

E3 ALLIANCE CAN SHOW YOU HOW TO LEVERAGE DATA TO IMPROVE OUTCOMES FOR YOUR SCHOOL

We provide highly interactive workshops with the information needed to optimize campus resources to improve student outcomes. Learn how to compare multi-year data to instructional and operational activities and look for patterns to help optimize and create Campus Improvement Plans.
